16-JUN-1998 (first entry)
7-cell epitope peptide 10 from Japanese cypress pollen antigen Chaol.
Japanese cypress pollen; antigen: T-cell epitope: Chaol; Chaol;
diagnosis: allergy: spring tree pollen disease; pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gars
                                                                                         24-MAR-1998 (first entry)
Multi-epitope peptide used as immunotherapeutic agent #4.
Multi-epitope peptide: immunotherapeutic agent; allergic disease:
T-cell epitope region: allergen: lymphocyte: immunoglobulin E.
Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a Treell epitope peptide from Japanese oppress pollen antigen Chaol The present invention describes peptides which correspond to the Treel opitope sites on Japanese Oppress pollen autigens Chaol and Chaol. The peptides can be used as a readent for the diagnosis of allergy to Japanese cypress pollen, and as an antigen in the treatment and prevention of spring tree pollen disease in which the Sequence 20 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       DNA eccoding charactyparts obtuss poller alterger. T cell ceptope(s) of which are useful in development of protentative and treating agent for C obtuss pollen pollinosis.

Claim 2 Pages 10-11, Topi Japanese.

The present sequence is the C obtuss pollen altergen tha o I, the Troeil epitopes of which tan be used in the development of a preventive and treating agent for C obtuss pollen pollinosis.

C obtuss pollen (2.4 kg) was deeptessed with district electric and dried at room temp. Overnight that of was septial from it and purified. RNA was extracted from C obtuss pollen, and mRNA and mRNA and mRNA was extracted from C obtuss pollen, and mRNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          28-NOV-1996 (first outry)

Example 1; Page 14-15: 71pp: Japanese cypress pollen antigen chaul. The present invention describes pertides which correspond to the Treal: epitope sites on Japanese cypress pollen antigens Chaol and Chauz The peptides can be used as a reagent for the diagnosts of allergy to Japanese cypress pollen, and as an antigen in the treatment and prevention of spring tree poller disease in which the pollingsis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sign
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding changerypass of the superior alternance; not the analtering agent for Contrast policy prollings; provided the analtering agent for Contrast policy prollings; claim 8: pages 11-22; TAPPS Japanese.

The present sequence is the Conbtasa policy and refer cell epicopes of which can be used in the development of a preventive and treating agent for Conbtasa policy politinosis. Contrast policy of was agereased with diethyl ether, and afried at room temp, overnight. Chao I was sepd, from it and purified. NA was extracted from Coubtusa policy, and mRNA and conved.
                                                                                                                                                                                                                                                                                             The I epitope peptide portion of Lapanese cypress pollen antianns Chaol and Chaol and Chaol used for diagnosis and treatment of spring tree
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28-NOV-1996 (first entry)
Chamaecyparis obtusa pollen allergen Cha o I cENA (b).
Pollen allergen: Cha o I: I-cell epitope: prevention: treatment.
pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ...

PP Contains multi-epitope peptide containing I cell epitope regions from S Calum 6; Page 32; SRpp; Japanese.

C a new immunotherapeutic agent. It comprises I cell epitope regions from 2 Contains from 2 Contains and arginize or lysine Contains. J. Where the I cell epitope regions: have a positivity index Containers, where the I cell epitope regions: have a positivity index Contains from Faregen; have at least 70% reactivity with lymphocytes from patients contained and argent and are not reactive with immunodichilin E Contained to the allergen: and are not reactive with immunodichilin E Contained and treat a wide variety of allergen. Contained and treat a wide variety of allergen. Contained and treat a wide variety of allergen are reduced. De desensitisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      12-MAR-1996 (first entry)
Japanese cedar polien allerden Cry) I.
Japanese cedar: polien allergen: Cry; I: T-cell epitope: peptides:
prevention; treatment: cryptomeria poliinosis.
Cryptomeria japonica.
                                                                                                                     24-MAR-1998 (first entry)
Hulti-epitope peptide used as immunotherapeutic agent #3.
Multi-epitope peptide; immunotherapeutic agent; allergic disease;
T-cell epitope region; allergen: lymphocyte; immunoglobulin E.
Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             >core 118: DB 3: Length 134;

New cryptomeria pollen allergen Incell epitope peptide - used for prevention, treatment and investigation of Japanese cedar pollenosis Disclosure, Figs 1-2, 8pp. Japanese. R7538 is the Japanese cedar pollen allergen Cry) I. from which the Incell epitope peptides R89289-R89295 were derived. The peptides can be used for the prevention and treatment of cryptomeria pollenosis, and also for the investigation of pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

\ddot{\vec{a}}
                                                                                                        Nucleic acid sequence encoding tryptomeria japonica allerne. For the diagnosis treatment and prevention of allergic reactions for the diagnosis treatment and prevention of allergic reactions of Japonese cedar pollen collected from staminate cone samples were collected from a simple fresh pollen and staminate cone samples were collected from a simple Cryptomeria japonica (Japanese cedar) tree. RNA was preped and issert to synthesise CDNA. The CDNA was subjected to successive require por to yield a full length CTY j. clone. CTY j. I or an antiquence fragment of it may be used for detecting, treating and preventing an allergic response to Japanese cedar police allerged. It is capable of modifying both the B and T cell response to CTY j. and T cell response to a CTY j. and T cell response to CTY j. and T cell response.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sugi (Japanese Geda:) pollen autimen Cig): is usviul for diagnosis. Ireatment and prevention of sugi pollinosis. Claim 2: Page 5-7; gpp: Japanese. The coding sequence for the Japanese cedar ("sigi") pollen alimiten Cryl was isolated from a cDNA library prepared from polyA meNA. All or part of the Cryl: protein can be used for diagnosis, treatment sequence. 374 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sales

Modified Cryptomeria japonica (Cry ;) ; peptide(s) - useful for treating alleray to japanose cedar pollen allerayen or immunologically cross reactive allerayens

Solschosure, Figure 1: 60pp English.

Novel peptides of cry ; thave been modified as a part of a preformulation scheme to develop an optimised drug product for therapeutic treatment of humans suffering from alleray to Japanese cedar pollen alleragen valed is immunologically cross reactive with Japanese cedar pollen alleragen which is immunologically cross cedive with Japanese cedar pollen alleragen which is immunologically cross cedive with Japanese cedar pollen alleragen which render them particularly suitable for drug product formulation. Peptide fragments of Cry ; it modified and unmodified are given in R82491-R8255.

The sequence is that of the Japanese cedar pollen allergen cry ; which contains at least two I cell epitopes. Peptide antiques derived from it can be used for the treatment and diagnosis of allergies associated with Japanese cedar pollen. The poptides have enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match 52.4%; Score 118: DB 1: Length 374; Sect Local Similarity 60.0%; Pred. claim 1; Fig 13, 137pp: English.

The sequence is that of an isolated peptide of the Japanese reda:
pollen allergen CY (aring acids 71-90). The peptide, CJ1-8,
can be used for the treatment and diagnosis of allergies associated
with Japanese cedar pollen. I has enhanced therapeutic properties
but reduced side effects command to naturally occurring allergies.
                                                                                                                                                                                                                                                                                                                                                                     Antigens derived from Japane e cedar pullen allerden Gry ) I contain at least two I cell \{pltope(s)\} used to treat or diagnose
                                                                                                                                              Cry j I pollen allergen peptide CJ:-8.
Japanese cedar: detection: allergy: treatment; diagnosis:
T cell epitope: sensitiv'*y.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 6, Application US/08714901
Patent No. 5739289
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Reid, Robert A.
APPLICANT: Hemperly, John J.
TITLE OF INVENTION: Acid Sequences
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Richard J. Rodrick, Becton Dickinson
ADDRESSEE: and Company
STREET: One Becton Drive
OTHER INFORMATION: /label. ASN-glycos
OTHER INFORMATION: /note= "potential site of ASN-linked
OTHER INFORMATION: gl=losylation"
                                                                       NAME/KEY: Modified-si e
LOCATION: 453
OTHER INFORMATION: /labei- ASN-glycos
OTHER INFORMATION: /mote- 'potential site of ASN-linked
OTHER INFORMATION: glycosylation'

GNVSRA *type complete
genome polyprotein - plum pox virus (strain Rankovic)
29K protein: Afk protein: coat protein: cylindrical inclusion
protein; help-r component protein; nuclear inclusion
protein a: nuclear inclusion protein b
#formal_name plum pox virus, PPV
host Nicotiana clevelandii (tobacco)
30-Jun-1993 #sequence_revision 30-Sep-1993 *text_change
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            *product 29K protein *status predicted *label PRIV
